Claude Code - Learner Prompt Packet

Every prompt taught in the course, copy-paste ready. Built 2026-07-16 from the delivered decks.

Day 1 - Fundamentals

The Agentic Loop & Setup - Paste this: first contact

Use it for: What you are practicing

```
claude auth login
```

```
/doctor
```

```
Read package.json and tell me what this project does in three sentences.
```

Memory & CLAUDE.md - Paste this: memory workflow

Use it for: What you are practicing

```
/init
```

```
Remember: we use pnpm, not npm. Save that so you never suggest npm again.
```

```
Write HANDOFF.md: what you tried, what worked, what failed, what is next - so a fresh
session can continue from that file alone.
```

Context Mastery - Paste this: sharp delegation

Use it for: What you are practicing

```
Add JWT auth to @auth.js following the middleware pattern in @payments.js. Run the auth
tests to prove it.
```

```
POST /api/tasks returns 500. Read @src/routes/tasks.js, find the cause, fix only that, and
show me the diff.
```

Commands, Cost & Permissions - Build a human-invoked skill

Use it for: What you are practicing

```
Create .claude/skills/review/SKILL.md with name review, description 'Review a target for
security, performance, and style', disable-model-invocation: true, allowed-tools Read, Grep,
Glob; body: review $ARGUMENTS and return prioritized findings with file references.
```

```
/review src/auth/login.ts
```

Day 2 - Extensions

Skills - Paste this: your first skill

Use it for: What you are practicing

```
Create a skill at .claude/skills/code-review/SKILL.md in the current project directory. Trigger on 'review the code', 'check for bugs', 'QA this file'. Review for security, error handling, and test coverage. Read-only tools.
```

```
Show me the SKILL.md you created and explain what each frontmatter field does.
```

Hooks & Custom Commands - Paste this: a /test-this command

Use it for: What you are practicing

```
Create .claude/skills/test-this/SKILL.md with name test-this, description 'Generate tests for a file', disable-model-invocation: true; body: 'Write unit tests for $ARGUMENTS. Cover happy path, edge cases, and error handling. Run the tests and report results.'
```

```
/test-this src/utils/helpers.js
```

Advanced Skill Systems - Paste this: eval your skill

Use it for: What you are practicing

```
Create an eval set for my code-review skill: 5 prompts that SHOULD trigger it and 3 that should NOT. Run each, report which fired correctly as a pass/fail table.
```

```
Analyze the failures and propose one improved description. Show old vs new side by side.
```

Plugins & Marketplaces - Paste this: package your toolkit

Use it for: What you are practicing

```
Run claude plugin init to scaffold a plugin called my-toolkit. Move my .claude/skills, hooks, and commands into it and update the manifest to reference them.
```

```
Install my-toolkit from the local path into a fresh test project and list what became available, with namespaces.
```

Day 3 - Orchestration & Production

MCP: connect to everything - Paste this: wire up a server

Use it for: What you are practicing

```
claude mcp add github -- npx -y @modelcontextprotocol/server-github
```

```
claude mcp add --transport http linear https://mcp.linear.app/mcp
```

```
claude mcp login linear
```

Subagents & agent teams - Paste this: nest and grade

Use it for: What you are practicing

```
Launch a research lead subagent for the payments module. Have it spawn one subagent per
service, then compile a single dependency report for me.
```

```
Spawn 3 subagents to each draft the retry logic independently. Then spawn a grader subagent
that scores all 3 against rubric.md and reports the winner with scores.
```

Production & CI/CD - Paste this: headless runs

Use it for: What you are practicing

```
claude -p "Review src/ for error handling gaps" --max-turns 5 --allowedTools
"Read,Grep,Glob"
```

```
claude -p "List all TODOs with file paths" --output-format json
```

```
git diff main...HEAD | claude -p "Review this diff. Flag critical issues only."
```

Scale, cost & new surfaces - Paste this: parallel worktrees

Use it for: What you are practicing

```
git worktree add ../app-feature-a feature-a
```

```
git worktree add ../app-bugfix-b bugfix-b
```

```
cd ../app-feature-a && claude # session 1 - repeat in b for session 2
```
