

Lab 3: Data Analysis Challenge

Time: 30 minutes

What you need: Claude.ai + Claude in Excel (if installed)

Files provided: `q4-sales-data.csv` , `competitor-intel.txt`

The Scenario

You're preparing for a Monday morning leadership meeting. Your VP wants: 1. A quick read on Q4 sales performance 2. A competitive battle card the sales team can use 3. To know if any reps need coaching

You have 30 minutes. Go.

Part 1: Analyze Sales Data in Claude.ai (10 min)

1. Open a conversation in Claude.ai (or use your Project from Lab 2)
2. Upload `q4-sales-data.csv`

Start broad, then drill down:

"Analyze this Q4 sales data. Give me the headline numbers: total revenue, quota attainment, and top/bottom performers."

Then follow up:

"Which regions are trending up vs. down month-over-month? Any reps I should be concerned about?"

Then create your deliverable:

"Write a 3-paragraph Q4 Performance Summary I can paste into an email to my VP. Lead with the good news, flag the risks, and end with 2 recommendations for Q1."

Checkpoint: You have an email-ready summary. Copy it — you'd actually send this.

Part 2: Competitive Battle Card (10 min)

Upload `competitor-intel.txt` to the same conversation.

Prompt 1 — Structure the data:

"Create a comparison matrix of us vs. the 3 competitors. Columns: Pricing, Strengths, Weaknesses, Win Strategy. Make it an artifact."

Prompt 2 — Make it actionable:

"Now create a one-page Competitive Battle Card for our sales reps. For each competitor, give: 2-sentence positioning, top objection they'll hear, and our counter. Keep it scannable — reps will read this on their phone between calls."

Prompt 3 — Get specific:

"NimbleOps lost us 4 deals last quarter from free tier conversions. Write a 60-second talk track for when a prospect says 'we're already using NimbleOps free tier.'"

Checkpoint: You have a battle card artifact and a talk track. Both are print-ready.

Part 3: Claude in Excel (10 min)

If you have Claude in Excel installed:

1. Open `q4-sales-data.csv` in Excel
2. Use Claude in Excel to:

"Add a column calculating each rep's quota attainment percentage"

"Highlight reps who missed quota in any month"

"Create a summary row showing totals and averages"

If you don't have Claude in Excel:

Continue in Claude.ai:

"Based on the sales data, create a formatted table showing each rep's Q4 totals: revenue, quota, attainment %, deals closed, and average deal size. Sort by attainment. Flag anyone below 90%."

"Which rep would benefit most from coaching? What specific metrics support that recommendation?"

What You Delivered

In 30 minutes, you created: - □ Q4 Performance Summary (email-ready) - □ Competitive Comparison Matrix - □ Sales Battle Card (print-ready) - □ Competitor-specific talk track - □ Rep performance analysis with coaching recommendation

This is a real Monday morning. The difference is you did it in 30 minutes instead of 3 hours.

Tip: Save your best prompts. Next quarter, upload Q1 data and reuse them. The prompts are as valuable as the output.
